

**INTRODUCING THE**  
**ARMORY SYSTEM**

# Scott Coons

**OWNER, DESIGNER**

**The Armory System evolved from the need for a way to mount weapons inside a concealment headboard, which was in line to be the first product offered by Castle Tactical.**

**The concealment headboard was presented to the public at the NRA show in April 2023.**

**It was well received, but people were far more interested in the slotted panels displayed as a secondary product.**

**The decision was made to pivot to the  
Armory product and develop it first.**

**It is now ready for production.**

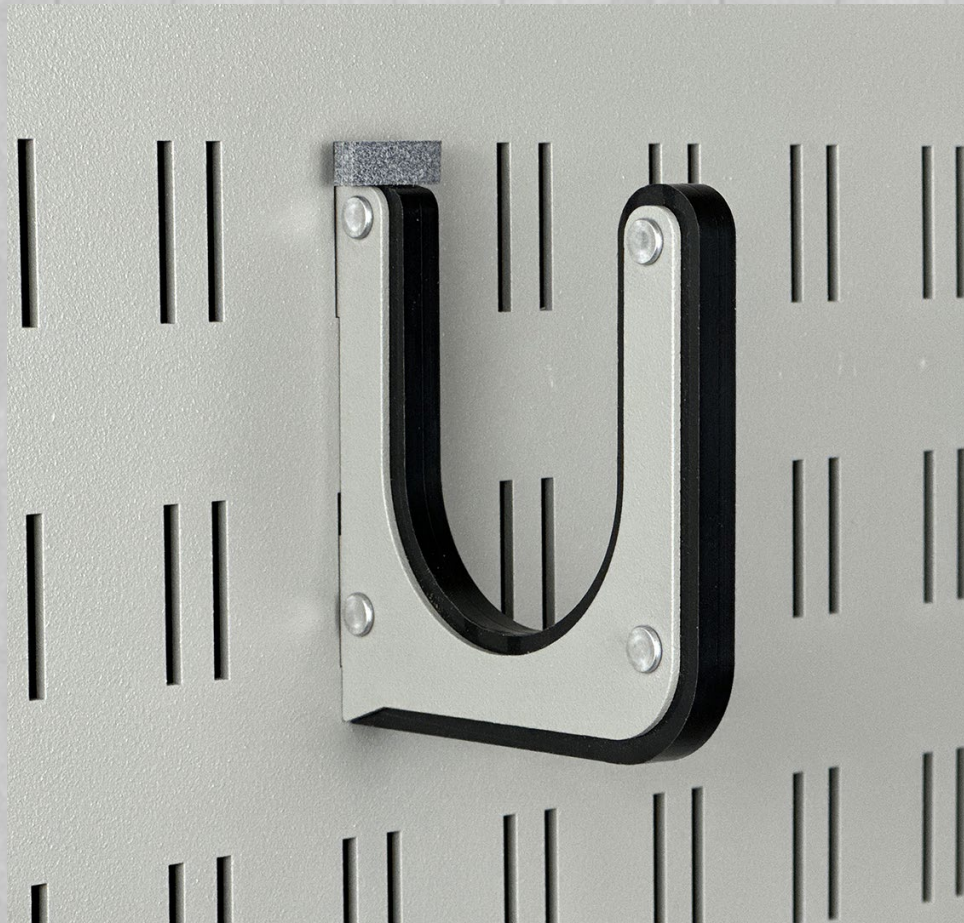

**The foundation of the armory system is a set of 14-gauge steel panels, sized in increments of 16” wide and 12” tall. These measurements exploit standard stud spacing of 16” found in most homes.**

**The panels can be arrayed in any configuration to fit into almost any wall space. The slotted pattern maintains proper spacing throughout the installation so accessories may span multiple panels.**

**A wide array of attachment accessories makes mounting your firearms easy, and with our patent-pending tool-free securing plug, you can relocate accessories very easily.**

**The Armory System  
can be used for  
display purposes,  
sized for a  
particular wall, with  
room to grow.**

Overall size: 64"W x 36"H

**It can also be used  
for efficient  
storage.**

**Armory panels  
have 30% more  
connect points  
than G\*\*\*\*\*h**

Overall size: 64"W x 36"H

**Accessories will constantly be added, and requests for specific accessories will be considered if it would be popular with consumers.**

**In fact, we are already considering offering products for other purposes, such as:**

- ✓ Fishing Equipment Storage
- ✓ Sporting Goods Storage
- ✓ Wine Racks
- ✓ Musical Instrument Display
